

**Conclusion:** In current conditions, an increasing role in the curative process of syphilis in pregnant women is attributed to bioethics. Appropriate involvement of bioethical principles potentially streamlines the medical act, supplementing it with new elements and opportunities and orienting it towards evident positive effects.

**Keywords:** bioethics, medicine, medical act, venereal disease, syphilis, pregnant women

## 15. THE ETHICAL APPROACH OF MEDICAL STUDENTS' LIFE AND HEALTH DURING PRECLINICAL YEARS OF STUDIES

**Onica Natalia**

*Academic adviser:* **Ojovanu Vitalie**, Ph.D., Associate Professor, Chief of Philosophy and Bioethics Department, State Medical and Pharmaceutical University "Nicolae Testemițanu", Chișinău, Republic of Moldova

**Introduction:** Teaching courses that emphasize the importance of multilateral conception of life and health during the first years of studies at Medical University have a great importance nowadays. The actuality of this theme is distinguished by the fact that students being deeply involved in studying some subjects can ignore not only the medical importance of this conception, but also its value.

**Purpose and Objectives:** The main purpose of this work is to improve medical students' life and health ethical approach during preclinical years of studies. In order to emphasize this purpose it's necessary to point out some objectives, such as: to form and strengthen some adequate ethical visions to this type of students; to test these students' mood concerning their own beliefs about the value of life and health; to form efficient methods concerning the implementation of these values during clinical years of studies and afterwards in medical practice.

**Materials and Methods:** Different scientific materials published related to this subject have been used in this research. There have been applied the analytical, bioethical, comparative-historical and sociological methods.

**Results:** Courses that contain information about ethics are welcome in the process of forming and developing some ethical visions about life and health during the first years of studies at the Faculty of Medicine. This may essentially contribute to the formation of a new opinion about the real value and importance of life, thus, being a support for the clinical years, implementing these conceptions in medical practice. There have been made different investigations among 1<sup>st</sup> year medical students, among 1<sup>st</sup> and 2<sup>nd</sup> year students of Faculty of Medicine and Faculty of Dentistry. As a result, it has been established that 47% of them lack a consolidated ethical attitude about life and health. The majority of them showed a favorable attitude in adequately specifying of ethical values of life. Therefore it's necessary to study thoroughly the process of developing a proper moral-spiritual attitude of students in order to facilitate the easier assimilation of values "life" and "health".

**Conclusion:** To consolidate ethical positions concerning the correct conception of values "life" and "health", it's necessary to motivate medical students by establishing some well-defined aims during the process of clinical studies.

**Keywords:** Ethics, bioethics, life, health, medical students, values

## 16. THE COMMUNICATION AND THE RELATIONSHIP BETWEEN THE FAMILY DOCTOR AND THE OBESE PATIENT IN THE RURAL AREAS

**Marinciuc Patricia, Juncu Victor, Marinciuc Mădălina**

*Academic adviser:* **Maria Dorina Pașca**, Associate Professor Dr., psychologist, Social and Human Sciences, University of Medicine and Pharmacy of Târgu Mures, Romania.

**Introduction:** The obese patient is a person that not only has a health problem, but will develop in the future a series of attitudes which will affect him psychologically, leading him to certain behaviour.

**Purpose and Objectives:** The study highlights the importance of a good communication between
